TAGPROTOCOL

BEFORE YOU START

Tag Protocol is built on Binance Smart Chain and you must complete three essential steps before you get started on the TAG Protocol.

Step 1: Download a Binance Smart Chain Compatible DAPP Wallet

A Dapp wallet is simply a cryptocurrency wallet that also has a built in browser through which you can access various dapps on your mobile or web device. List of Binance Smart Chain dapp wallets provided below.

Step 2: Purchase Binance Coins & Send them to your wallet (BNB)

TAG Protocol works on Binance Smart chain and therefore all Hashtag NFT purchase Transaction requires Binance coins **(BNB, BEP20 Tokens)**. You can buy 220$ worth of BNB from any cryptocurrency exchange of your choice and send them to your dapp wallet pre-hand to pay for your Hashtag.

Contract will automatically calculate & take only 200$ worth of BNB based on the price conversion provided by chainlink price oracles. We recommend that you always buy & keep 20$ worth of extra BNB to pay for the transaction fees and to account for bnb price fluctuations on the market.

Step 3: Keep Referral Address Ready

Hashtag Pre-sale is by invitation only, you must possess a referral address provided by someone you know to be able to buy a hashtag and register your wallet on the Tag Protocol.
